

## Phase II

- A new Github account is created with an ID following the instructions as mailed. In my case my github user id is **DFA20SCM37K**
- A new issue is created with the title “**DFA20SCM37K adding last name**” and then labelled this issue according to the convention given.

DFA20SCM37K adding last name #280

- The repo is now updated by executing the following commands, and since my last name starts with the letter K, my github userid is added to the file k.java. Once the necessary changes are made, the code is committed and pushed.

```
